Lue tämä käyttöopas huolellisesti.

Tarkista, että tuote vastaa toimitusta.

Jos jotakin puuttuu tai on rikki ota yhteyttä liikkeeseen, josta tuote on ostettu saadaksesi mahdolliset viat tai puutteet korjattua.

Työkaluvaja on valmistettu käsittelemättömästä puusta. Tuote on loppukäsitteltävä.

Suosittellemme kaikkien pintojen käsittelyä puunsuojalla, joka sisältää homeenesto -tehoaineita.

Käsittelemätön puu voidaan helpoiten käsitellä ennen kokoamista.

Suosittellemme huopakaton asentamista vajan katolle (kattohuopa ei sisälly toimitukseen).

Loppukäsittely ja kunnossapito:

1. Uusi puupinta: Pöly ja lika poistetaan huolellisesti ennen loppukäsittelyä käyttämällä sopivaa ainetta.
2. Kulunut puupinta / alkava kuoriutuminen: Jos puu on kulunut tai maali alkaa kuoriutua hiotaan pinnasta esille uutta puuta. Paljas puu pohjamaalataan Gori 11/12 puupohjusteella, joka antaa puulle perusteellisen suojan lahoamista ja sieniä vastaan. Pohjakäsittelyn jälkeen puu on valmis viimeisteltäväksi.

Maalatut pinnat on tarkastettava ja puhdistettava säännöllisesti. Tällöin poistetaan itiöt ja siitepöly pinnalta. Tämä pidentää niiden ikää ja estää homeen ja levien kasvun.

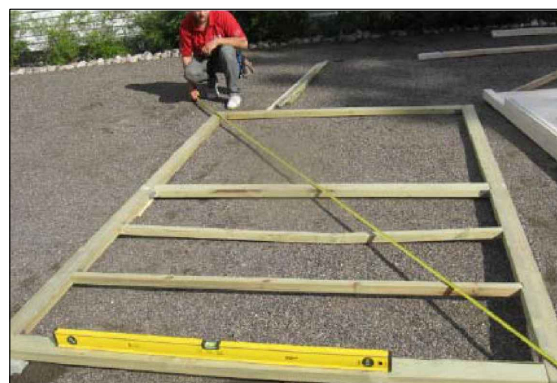

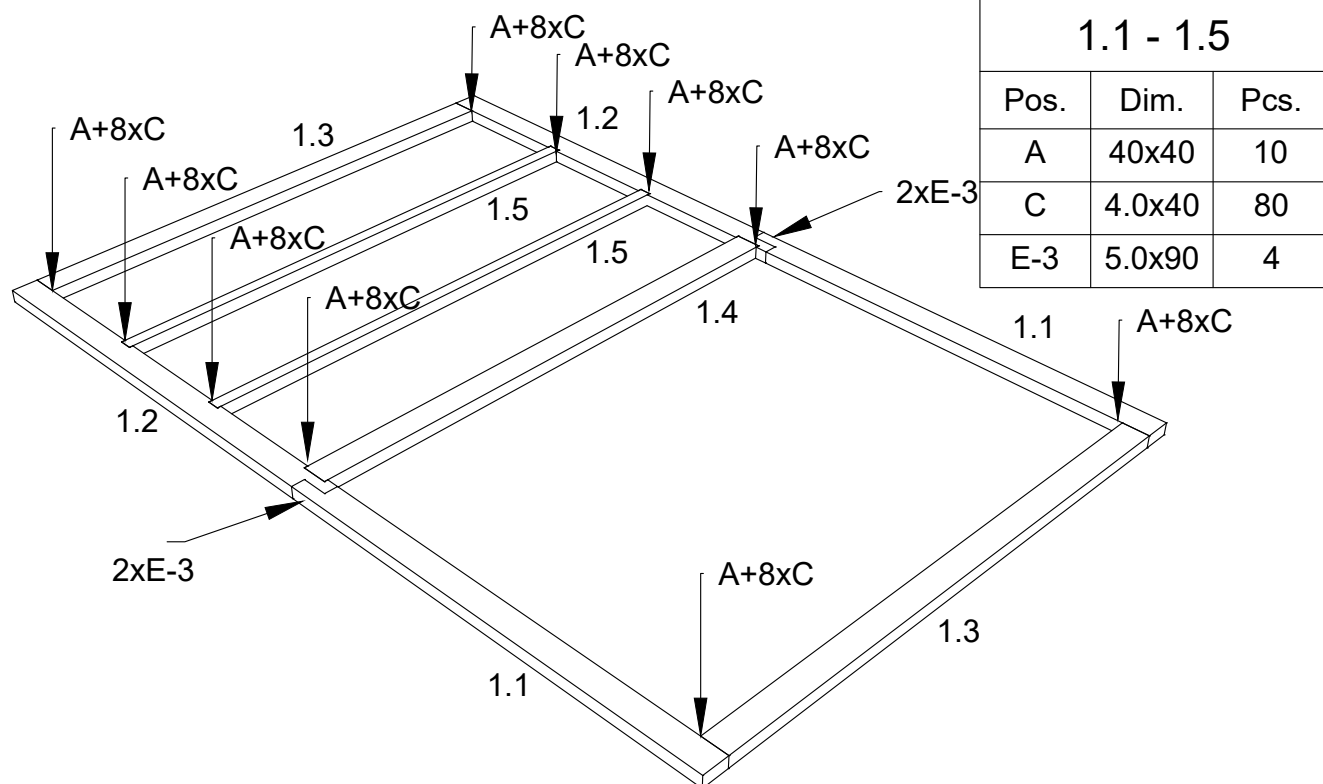

Tuotteen sijoituspaikalla ja sen tuulisuudella ja muilla sääolosuhteilla on suuri vaikutus pintojen kestävyYTEEN. Yleensä liitoskohdat, päätypuut ja vaakapinnat pitäisi suojata parhaiten, jotta vähemmän halkeilua ja kuoriutumista esiintyisi.

Oksakohdat ja kulumat saattavat näkyä kellertävinä kohtina.

Hartsit voi imeytyä puuhun pisaroina, jotka kiteytyvät sen pinnalle. Ne poistetaan kevyesti hiomalla ja viimeistellään maalilla.

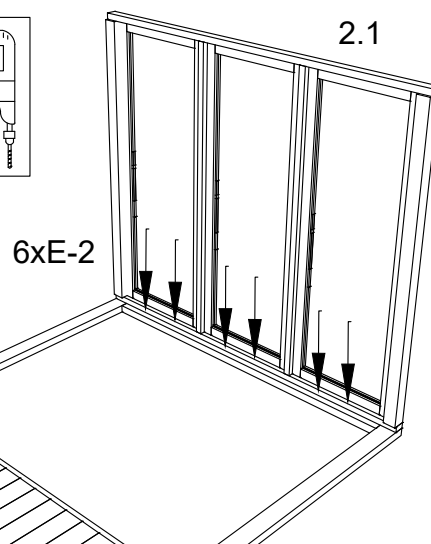

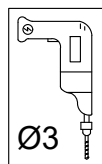

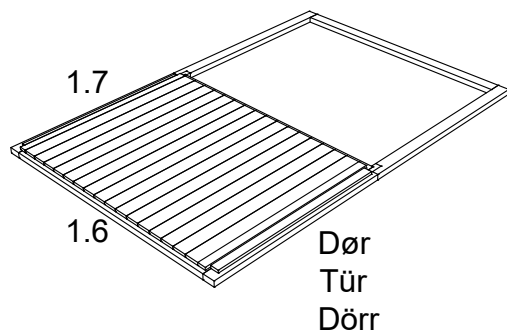

Puu on elävä materiaali, johon tuuli ja sää vaikuttavat. Siksi halkeilu on luonnollista ja väistämätöntä, mutta se ei vaikuta puun vahvuuteen ja kestävyYTEEN.

Halkeamat ja niiteistä ja ruuveista johtuvat jäljet eivät kuulu takuun piiriin.
