Yleisiä tietoja

Asennuskeittiön asennuksen on oltava asianmukaisesti koulutettujen asiantuntijoiden suorittama. Asennusohjeet on luettava ennen asennusta. Laitteiden, pesualtaiden, valaisimien ja erikoisvarusteiden mukana on erityisiä, yksityiskohtaisempia asennusohjeita ja huomautuksia, joita on myös noudatettava. Seinään kiinnitettävien yksikköjen kiinnittämistä koskevat seuraavat ohjeet:

Emme toimita mukana kiinnitystarvikkeita. Tarkista seinän kunto ja ota yhteyttä paikalliseen erikoisliikkeeseen asianmukaisten seinätulppien / koukkujen / ripustuskiskojen / ruuvien hankkimiseksi.

Ripustukseen **voidaan** käyttää joko koukkuja tai ripustuskiskoja.

Oikein asennettuna **seinäelementtejä** voidaan kuormittaa noin 40 kg:lla. Varmista, että kuorma jakautuu tasaisesti. Jos asennusohjeita ei noudateta, emme voi ottaa vastuuta aiheutuneista vahingoista.

Varmista, että yksittäiset kaapit tai koko keittiökokonaisuus on **varustettu** kallistuksenestolaitteella Saniteetti- ja sähköasennukset saa tehdä vain pätevä sähköasentaja.

Tarkista ennen porausta, ettei porauspaikalle ole asennettu kaasu-, vesi-, sähkö-, lämmitys- tai viemäriinjoja.

Lisävarusteisiin tai sähkölaitteisiin ei saa **tehdä** muutoksia. Tämä koskee erityisesti kiinnitysreikiä.

Tarkista ennen asennusta, että kaikki liitännät ovat olemassa ja että ne on tehty oikein.

Keittiössä on pieniä osia, joita voi niellä. Älä jätä alle 3-vuotiaita lapsia ilman valvontaa

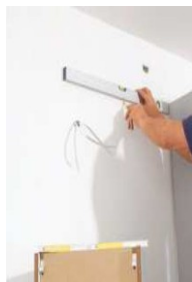

Suosittelava menettely keittiön kokoamisessa:

Suunnittele tarkka asennuspaikka ottaen huomioon putki- ja sähköliitännät.

Tarkista, tarvitseeko jääkaappipakastimesi tuuletusaukkoja sokkelin tai työtason alueella. Tarvittaessa hanki sopivat tuuletusritilät erikoisliikkeestä ja leikkaa sokkeli tai työtaso laitteen valmistajan ohjeiden mukaisesti.

Päätä, haluatko asentaa ovet oikealla vai vasemmalla saranalla.

Asenna ensin alakaapit paikalleen ja **tasaa** ne vesivaakaa käyttäen.

Revi työtason alapuolella oleva keittotason leikkaus auki merkityn alueen kohdalta. **Keskitä** se niin, että pesuallas on keskellä alakaappia ja että työtason jäljellä oleva leveys **on** sama edessä ja takana.

Pora jokaiseen neljään kulmaan 10 mm:n reikä, jotta palapelin asettaminen paikalleen on helpompaa ja jotta voit **leikata** tulisiijan leikkauksen halkeamia pitkin. Työskentele aina laudan alapuolelta, jotta pistosaha ei aiheuta laudan pinnan haurastumista. Kytke myös pistosahan heiluritoiminto pois päältä, jos sellainen on käytettävissä.

pitkin. Työskentele aina laudan alapuolelta, jotta pistosaha ei aiheuta laudan pinnan haurastumista. Kytke myös pistosahan heiluritoiminto pois päältä, jos sellainen on käytettävissä.

Technical drawing of the A7 cabinet, showing exploded views and assembly details.

Top Left Detail: Shows the installation of screws (21, 4x30) into the top panel (A3) using a bracket. A dimension of 17mm is indicated.

Bottom Left Detail: Shows the installation of a bracket into the bottom panel (A1) using a screw. Dimensions $T \pm$ and $H \pm$ are indicated.

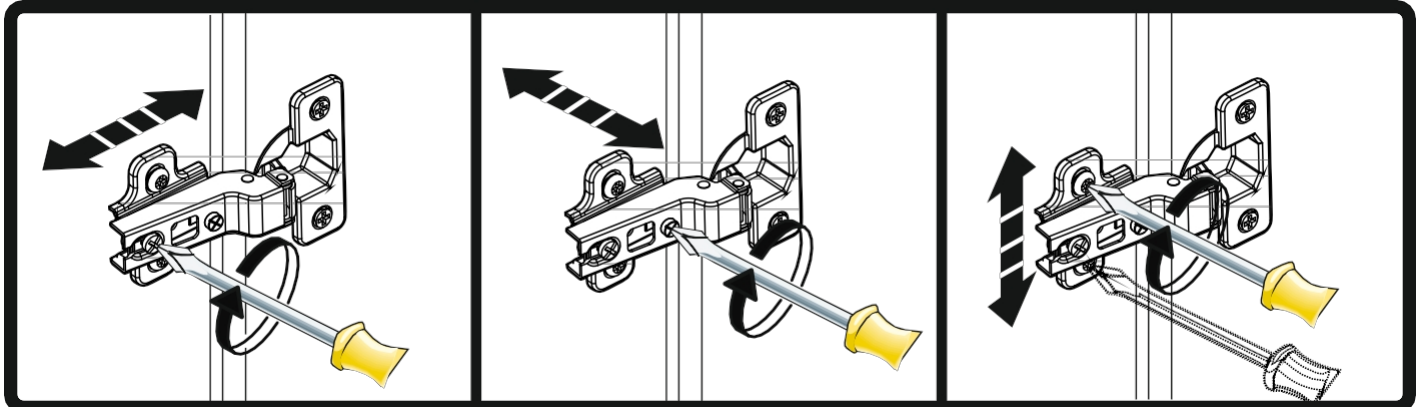

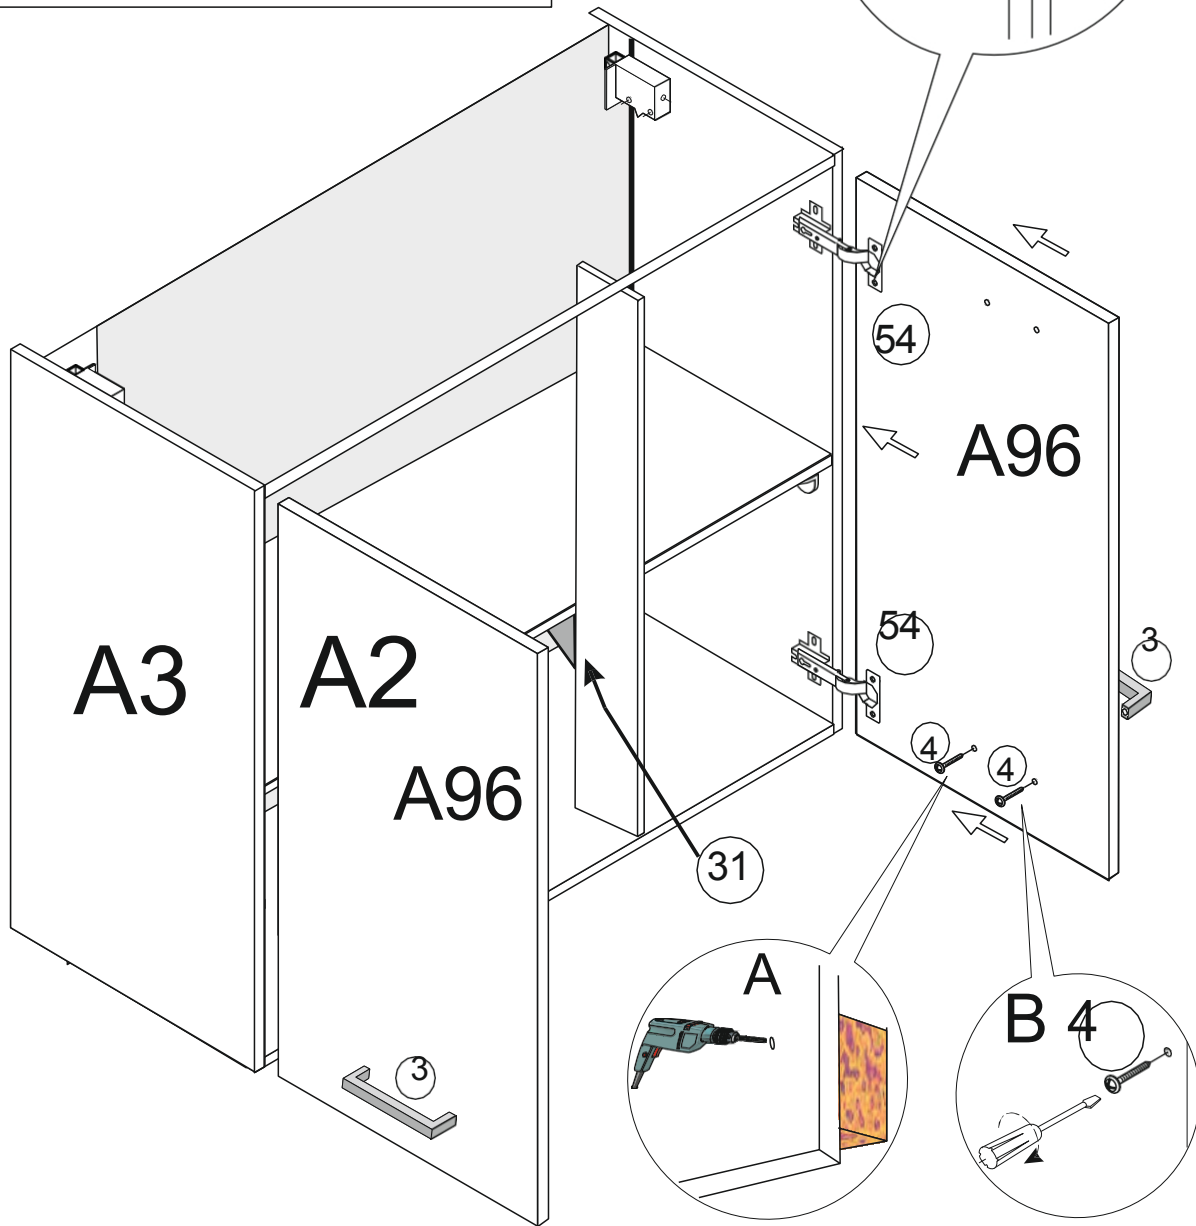

Main View: Shows the exploded view of the cabinet panels: A3 (top), A1 (bottom), A5 (middle), and A7 (door). The door (A7) is shown open, revealing the internal structure and the installation of a handle (13).

Right Side Detail: Shows the installation of a handle (13) into the door (A7) using a bracket and screws.

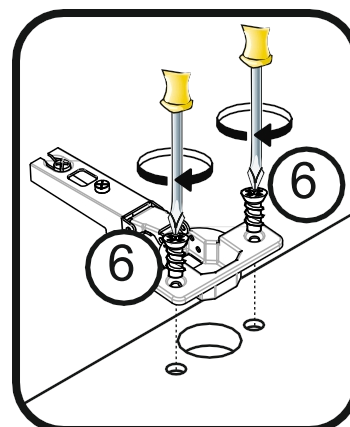

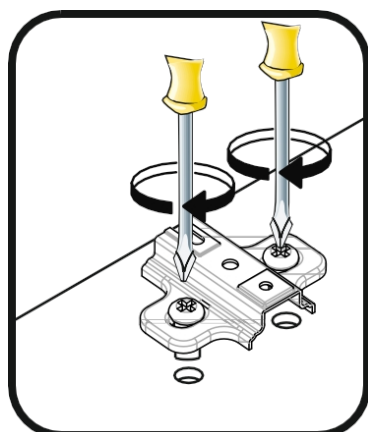

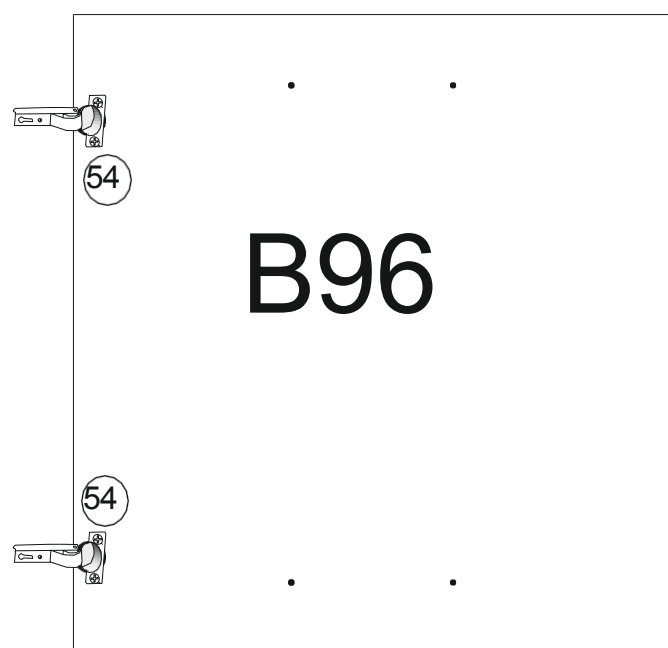

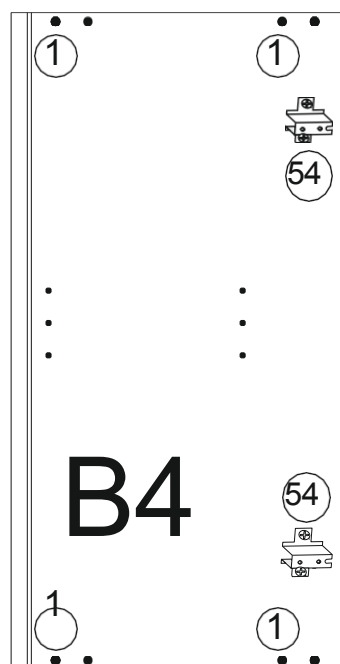

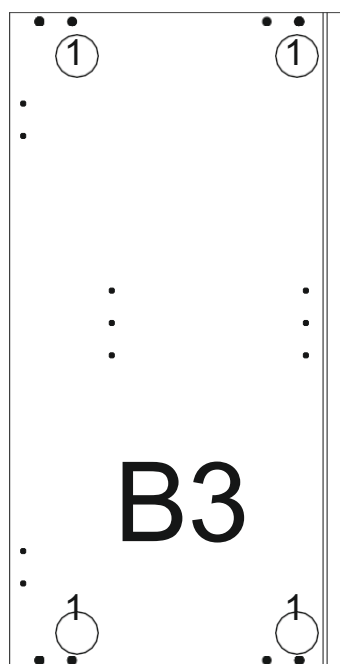

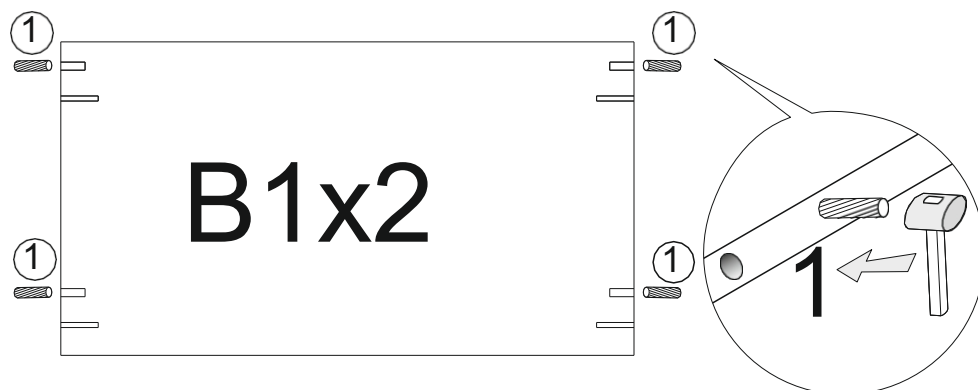

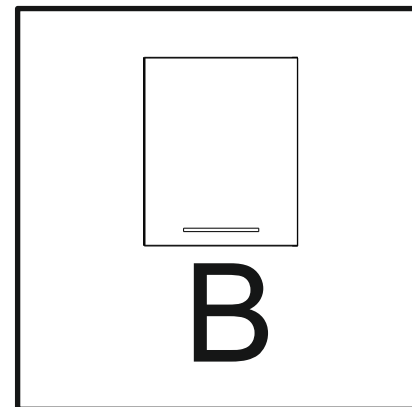

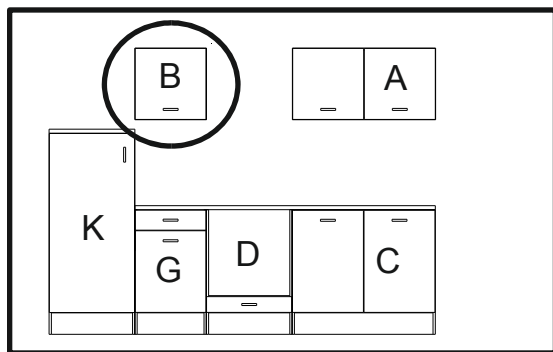

Bottom Right Detail: Shows the installation of a handle (13) into the door (A7) using a bracket and screws. The detail is labeled "OPTION".

Bottom Label: A7 967mm x 246mm
